

Easy, Affordable, Stylish

Multi-Room Music was Never so Simple!

Channel Vision's A-BUS® system distributes high quality audio to every room in your home over standard CAT5 data wire. Through A-BUS patented technology, a single CAT5 cable carries audio, power, data and status signals from an audio source in one location to amplifiers and speakers in another room. Each pair of speakers is powered and controlled from a local wall plate with a dedicated amplifier for that zone.

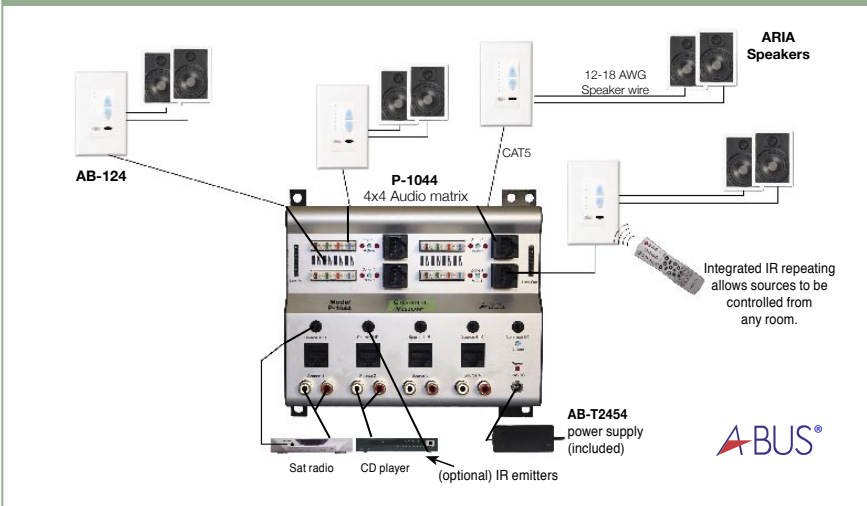

A-BUS Audio Single-Source/Multi-Zone Audio Distribution

Single-Source A-BUS System

- Single-source music distribution to multiple rooms
- Built-in IR repeating for control of source component
- Local source modules allow in-room audio sources to be connected & heard through in-room speakers
- Use Channel Vision's iBus® docking station to integrate music from an iPod®
- User-friendly, economical, and easy to install

Multi-Source A-BUS Audio

Multi-Source A-BUS System

- Distributes 4-sources of music to 4 different zones
- Source specific IR routing allows independent control of different sources
- Easy source selection via the wall keypad or handheld remote control
